SAVE A SCRATCH FILE
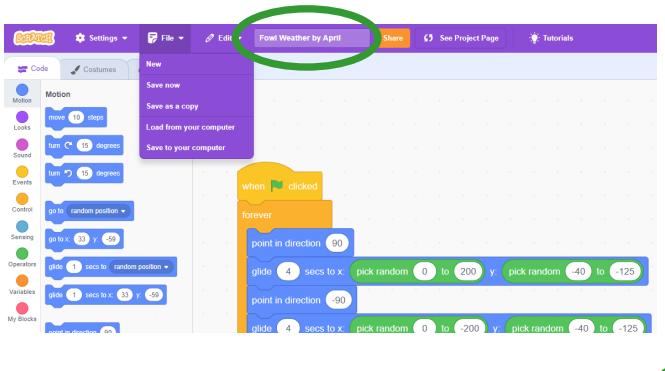

Have you been working on a project and you are ready to save it to your computer, or a USB? Follow these steps to save your program for next time.
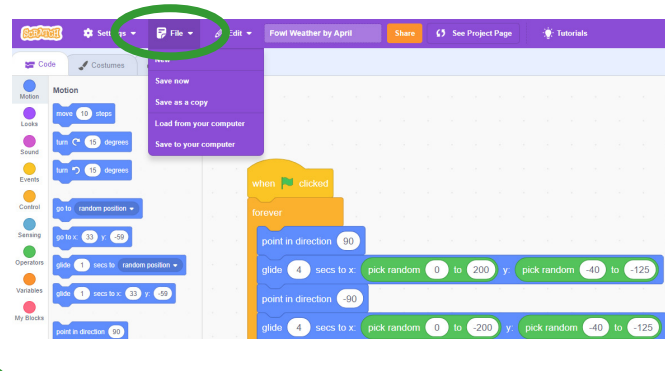

**1** Make sure you have given your project a name.

**2** Click 'file' in the Scratch menu.

3 In the drop down menu, select 'Save to your computer'. This will save a file to your Downloads folder.

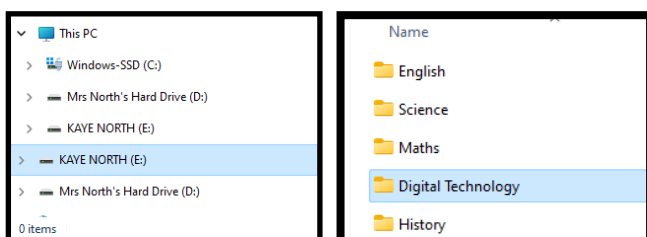

4 Open your downloads folder to find your file. It will be
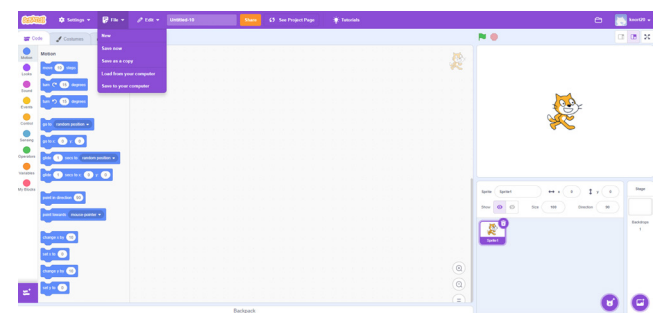

nameofyourproject.sb3

5 Now you can save this to the location of your choosing. If you are working on your own computer, move it to the correct folder. If you are working on a shared computer, save it to a USB.

6 Your Scratch program is now saved. Remember that when you want to open your file, you have to open it inside the Scratch program!

Great work - what will you create next?
