Some FAQs answered

Do projects have to be done individually?

No. Projects can be done individually, in pairs, small groups, or large groups. It all depends on your own planning and what you want to achieve.

Should we complete the project as is? Or change it?

Our project guides will step out a base project. Young people can create them by following the instructions, by taking on one of the extension challenges at the end, or by adding their own innovation the whole way through. Our top tip? Stick to the theme of the project and make it your own.

We plan to submit our projects. How will they be judged?

This year to support our judges and young people, we have shared our criteria sheet that will be used for judging. Hopefully, this will help you too!

Are there certificates we can present to our young people?

Yes. Each of the project pages has links to access the certificates, as well as the Host an Event page on the Moonhack website.

Do we have to be finished by October 30th?

No. The projects can be finished at any time. If you are submitting for the competition, they will need to be finished by November 22.

What happens to the projects after Moonhack is finished?

The Moonhack projects will remain on the Code Club Australia website. If you look at the Moonhack category of projects, you will find most of the projects from years past.

My young people want to make their own project, and not follow instructions. What should we do?

Choose the Moonhack X project. This is a design brief where there are no instructions to follow, but there is a problem that needs to be solved. Young people can code using any coding language and can choose to incorporate physical computing elements.
